

Wilton's Red Jonaprince Select

Deep red colour and high yield

This clone is a colour mutation from the Jonagold with early colouration. It delivers a very high and regular yield of large, dark red fruit. Its flesh is very firm, tastes excellent, and the fruit can be stored easily.

Origin

Mutation, discovered in the nursery of the Princen brothers in Weert (NL)

Tree

Quite strong growth to begin with, then moderate growth, advantageous horizontal branch layout, medium to late bloom

Pollinators: Braeburn, Gala, Golden Delicious, Idared, Golden Gem, Prof. Sprenger.

Harvest

Middle to end of September, a single picking run may suffice under certain circumstances.

Our Tree - Your Success

The Gruber Genetti Nursery has been the epitome of **supremely high quality** apple tree propagation **since 1991**.

Our production site in Roverchiara, Verona/Italy comprises **more than 200 ha**, providing us with a yearly production of **about 2 million apple trees**.
